

quality installations built to stand the test of time

the complete solution

transformation  
the complete solution

If you are considering replacement windows, doors or roofline, or need extra space in which to relax with a new conservatory, there is no better place to begin than this book which we hope will serve as a usefull introduction to our philosophy on contemporary design and security. From traditional casement windows to continental style tilt and turn windows, and from roofline to spacious, breathtaking conservatory installations we have the finest PVC-u products in the UK that can really make the difference to your lifestyle.

*We can help you make a good house great  
and a great house simply beautiful.*

6

pride in your installation

*manufacturing excellence*

*Pride in an installation built to  
stand the test of time.*

As you will see in later pages our custom made profiles which assemble to make your conservatory, windows, doors or roofline products are made with more than great looks in mind. Our unique formulation is made to last decades, not just years. Imagine an installation that stays looking young and fresh while your garden and home evolve around it, an installation that enhances the natural character of its surroundings becoming part of a larger scheme yet bringing its own individuality.

Our profiles are colour fast and match throughout to create continuity of style with a look that lasts and lasts. The range includes various woodgrain finishes for a traditional look and yet also brings all the advantages of modern PVC-u systems. In short, we never compromise on style for performance.

# Complete the Puzzle

To stay one step ahead in the minefield of home improvements you need to know as much as you can about what you need, what is available and what is suitable. As a guide, look at this diagram for a quick reference point for what goes where on your home. All houses are built differently so don't worry if something appears here that you don't recognise.

**Roofline & Guttering Systems**

- roofline available in White or Woodgrain finishes.

## *A Warm Welcome*

window and door installations that make the best of your home

*W*indows that bring light into your world

*A*nd contemporary style to update any home

## *Welcome Home*

Colour matching is of great importance when considering new windows, and because we manufacture all our PVC-u at the same facility from the same mix, we can guarantee that our whites and colours will match. Also our unique blend of stabilisers will ensure that no unsightly yellowing will occur to spoil the finish in which we pride ourselves. Security is another great concern to you, and therefore us. All our profiles are accredited with the relevant standards and are built to withstand sustained attack. We also design to ensure that all the latest security locks and hinges can be used in conjunction with our systems because, after all, when it comes to windows and doors beauty is pointless without strength.

*Light*  
Clean lines and smooth style that lasts

The basis of any window installation is the environmental control that they bring to your room. In winter you need something that lets in as much light as possible, yet keeps the warmth locked inside, while in the summer months controllability is needed to open up your living space. We have designed our window systems to tick all of these boxes and yet remain beautiful in both appearance and application.

## *The Contemporary Choice*

### Tilt and Turn Windows

As a great alternative to traditional casement windows you could opt for the continental style and accessibility of the Tilt and Turn window. Ingeniously it opens inward in two easily adjustable options, making them ideal for cleaning from the inside of your home. These innovative windows have all the great security features that you would expect and look strikingly different with added functionality.

# Style

## *Traditional style and peace of mind*

First impressions last. Many modern front doors try hard to give a good first impression but ultimately if the door looks as if it is trying hard to impress, the point has been lost. A front door, as first point of contact to a house, should do a number of things effortlessly. Feel welcoming, feel secure and add to the overall aesthetic appearance of your home. This is not an easy thing to do, but our product designers relish a challenge and have created our stunning range of residential doors. Available in smooth contemporary colours or classic woodgrain, our doors provide real kerb side appeal for your home.

# Security

*A warm welcome begins  
with the first impression*

It is believed that an opinion is formed about a house within the first 10 seconds, so making the right first impression is paramount. There are no second chances to make first impressions.

Our beautiful range of residential doors complement the rest of our range perfectly with textures and colours that defy expectations and fit perfectly into the style and concepts you have for your home.

*Bring the outside indoors and expand your world*

Our impressive range of patio doors are the ideal way to bring the outside in, linking areas with ease. Stylish French doors give a continental flavour to your home all year round. These installations not only add to the look and feel of your house, but also to the look and feel of your garden. Our French doors are available in white PVC-u and a wide range of stunning woodgrain and coloured finishes.

available colour finishes  
(Patio Door Range available in White, Mahogany or Rosewood)

# *A Room with a View*

conservatories that change your world

## *Your Evolving Environment*

We believe in good design, and if design has rules one of its fundamental ones is suitability. Our conservatories, along with our window, door and roofline products are designed with adaptability in mind. We build our installations to enhance your home and provide the “wow” factor. We hope to help your home evolve into something brighter and more enjoyable. It’s not merely about adding something impressive to your house, it’s about improving your whole living space.

## *The shape of things to come*

The Edwardian style has a square fronted projection which maximises the available space in the new conservatory you are creating. Capturing the elegant and dignified simplicity of the Edwardian architectural style, this type of conservatory is often the most appropriate way to extend your home.

The Lean-To option is highly adaptable with lengths and widths to suit any property. Adaptability, however, does not bring any concessions on style with the sleek lines of the lean-to conservatory roof being refreshingly, simply beautiful.

A Gable Ended conservatory has a flat faced frontage which gives extra height and increased light into your new room. This is a wonderfully simple style with an elegance and character all of it's own.

P-Shaped conservatories allow you to create multifunctional spaces that look as impressive from the outside as they do within. It can be in any of the usual conservatory styles; Victorian, Edwardian or Gable ended. The leg of the P-Shape can either be finished vertically or with a slope, called a hip, to the roof. This style of conservatory gives you the greatest freedom to create the space you dream of.

The Victorian style has a faceted projection which gives a distinctive and soft feel to the shape of the conservatory. Available in 3 and 5 faceted versions, a Victorian style conservatory extends gently into any garden space.

Four stunning rooms in one conservatory...

because Eurocell's installations come with built in versatility.

## Luxurious Dining

A home is not complete without a great dining area, a place for the family to share the best of life together. Imagine dining in a sumptuously decorated conservatory as you look out across your garden. If you are looking for a touch of decadent luxury this could add an extra dimension to your home.

In the dining room opposite we used a warm yet contemporary palate with deep red as an accent colour. The romantic surroundings are enhanced by the beautiful, candle lit oak dining set.

blinds supplied by [www.polascreeen.com](http://www.polascreeen.com)

## 2 A Place to Play

Imagine having a place to go that is full of your favourite things where you can go and make all the noise you like without bothering your family. Now imagine getting your living room back and putting all the kids clutter out into a new dedicated area where they can make all the noise they like without bothering you.

This child's play conservatory is a salute to all that is loud and fun. While your children are growing up, this space can feed their imaginations by letting them run freely between house and garden. We used a hardwearing wooden floor to finish this safe and enclosed area.

## 3 Relax in Comfort

Many modern homes would benefit from a second reception room. A place where you can relax and take life at your own pace. A conservatory fitted with the latest underfloor heating and air conditioning is the best place to build your own space and luxuriate in comfort, enjoying your favourite things.

For a fresh and contemporary feel we decorated this conservatory in a light, airy and modern palate to maximise the feeling of space. Pleated blinds, soft furnishings and laminate flooring (complete with deep luxurious rug), are complimentary in colour and texture which along with the lighting provides you with the perfect haven from the stresses of every day life.

# 4 *The Best of Both Worlds*

Having your own dedicated space does not necessarily mean an additional sitting room. This garden room is the perfect link between the garden you love and the home you cherish. You can bring the garden inside, but leave the dirt on the doorstep to have your ideal place to enjoy all of your hard work or simply relax when the weather lets you down.

This garden room is sparsely decorated to let the large space have the greatest possible functionality. The wicker furniture does not compete for attention with the surroundings and feels perfectly at home set against the hardwearing tiled floor over under floor heating, making this an ideal all year round garden space.

## *Keep the Elements at Bay*

a roofline system that preserves and protects with style

## Roofline Anatomy Explained

The term 'roofline' refers to all the edging and guttering around the base of your roof, and the cladding to the front of your house. Traditional wooden fascia and cladding rots, looking unsightly and providing no protection from the elements. Replacing old, damaged timber with new PVC-u is a great way to protect your home, improve its aesthetic appearance and keep a unified look throughout with colour matched systems. This page is intended as a guide to what goes where and how to spot what you may or may not need to replace.

Soffit Boards

Euroboard Fascia

Ogee Board

Capping/Utility Board

**Euroboard Fascia** fits directly onto your roof rafter. It is a direct replacement for old rotting fascia which stays white and is quick and easy to install.

**Ogee Board** is a style of fascia with a decorative edging for a distinctive look.

**Capping Board** covers existing fascia protecting it from the elements. This being the case it is quick to install with minimum disruption.

**Soffit Boards** fit under the Euroboard system providing a finished weatherproof seal which can be vented to allow airflow.

**Dry Verge** forms a bond between your fascia and the roof tiles creating a solid weatherproof join which can be colour co-ordinated to your roof tiles.

**Cladding** fits onto the front face of your home to provide great all year round protection from the elements

## *Taking a Closer Look*

our systems have far more than great looks on offer

## *Ingenious Ingredients*

The PVC used in our installations is derived from Salt and Oil. The electrolysis of salt water produces chlorine which is combined with ethylene, obtained from oil, to form vinyl chloride monomer (VCM). Molecules of VCM are polymerised to form PVC resin to which appropriate additives are incorporated to make a customised PVC compound.

## *U Make the Difference*

PVC can be plasticised to make it flexible for use as a gasket material for sealing window units, or unplasticised (also known as PVC-u, u stands for “unplasticised”) for its extensive use in building applications such as window frames and fascias.

## *Multi-chambered Insulation*

All our window and door profiles have multi chambered insulation designs for added heat retention and security. Combined with new ‘Low ‘E’ Glass’ double glazing the savings on your heating bills will soon become evident, as will the piece of mind that improved security brings.

## *Colour that stays*

Specially formulated ingredients ensure that our profile doesn't discolour over time. This means that no unsightly yellowing will occur in our profile, unlike other inferior products.

Perfectly colour matched roofline is also available. We use consistent PVC-u compound across our entire range of products, so you can be assured that if you install either our roofline or one of our conservatories alongside your windows and doors, it will match perfectly.

## *Sleep safe in the knowledge*

High security beading options help prevent burglars from removing panes of glass to gain entry to your property. Part of our commitment to built in security.

### **High security options**

Produced to accept a variety of high security locks, our profiles have been designed from the bottom up to offer unbeatable security.

## Accreditation for your Protection

With sturdy external walls our windows are manufactured to stand the test of time, and are more resistant to knocks and damage than thinner systems.

We are committed to achieving all applicable accreditation for both ourselves and our products, to help reflect the importance that high standards have throughout the organisation. Our systems are fully accredited and where possible exceed all current regulations. We also know that as new standards are introduced we will be the first to achieve them.

## *Your Home Improvement In Safe Hands*

We exclusively use the Eurocell brand of PVC-u profiles and building plastics. Eurocell has grown over the last 25 years from humble beginnings to become one of the leading manufacturers in the UK. Based in Derbyshire they are a major employer in the region and pride themselves on being an essential part of the regional economy. Eurocell have made a commitment over the years to invest in both employee relations and technology to keep them at the cutting edge. In a business that lives or dies on reputation and recommendation we are proud to specify Eurocell products time and time again. We are confident that you will be completely satisfied with your Eurocell home improvements and hope that you will pass on our good name, helping us to continue to provide quality installations.

In terms of sheer build quality there is nothing available today that comes close to Eurocell. The sympathetic way that our systems have been designed to enhance existing structures rather than dazzle merely in their own presence is both encouraging and refreshing.

With full accreditation to back us up we are confident that the windows, doors, conservatories and roofline that we install will make a significant difference to your home and therefore your lifestyle.
